

Cognitive Console v2: five-signal UI contract

All numbers are read from frozen local artifacts; no humans/GPU/API/model calls.

Deliberation

LEGIBLE: no added control demonstrated
READ: HOLDS facade ratio=0.583
TRANSFER: FAIL μ =0.015
PROMPT-CEILING: TEST prompt mean=0.020
CALIBRATION-CONTRAST: NO_ROBUST_HARM No robust calibration harm flag for this axis.
EVIDENCE-TIER: exploratory (single-run facade READ; C2 behavior has 2` 2 robustness for uncertainty steer-vs-prompt contrast)

Uncertainty-awareness

LEGIBLE: no added control demonstrated
READ: HOLDS facade ratio=0.713
TRANSFER: FAIL μ =-0.228
PROMPT-CEILING: TEST prompt mean=0.848
CALIBRATION-CONTRAST: HARM steer-vs-prompt calibration contrast μ =-0.228, CI=[-0.370,-0.092]
EVIDENCE-TIER: exploratory (single-run facade READ; C2 behavior has 2` 2 robustness for uncertainty steer-vs-prompt contrast)

Method-strength robustness: steering still fails on TEST

DEV-optimized PSR-style latent recovery also fails all C2 axes on TEST. Outcome=pre-registered kill/null outcome.
Deliberation: pass=False μ =0.025 CI=[-0.030,0.100] | Skepticism: pass=False μ =-0.060 CI=[-0.210,0.070] | Uncertainty-awareness: pass=False μ =-0.160 CI=[-0.292,-0.039]

Numbers derived from frozen, independently audited artifacts.
